DETAILED ACTION

Response to Amendment

1. This Office Action is in response to the amendment filed 07/06/05. Claims 1-29 are pending. Currently no claims are in condition for allowance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Regarding claims 1 (line 10), 12 (lines 13 and 14), 21 (line 14), 23 (line 18) and 25 (line 8), the word "can" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 12, 21, 23, and 25 rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 15, 26, 44, and 59 of U.S. Patent No.

6,108,331 in view of Buckley (US 6,366,840). Both claims 1, 12, 21, 23, and 25 of the instant application and claims 1, 15, 26, 44, and 59 of US 6,108,331 are directed to an in-house signal distribution system including a main input node taking an external signal and converting the external signal to addressed data packets and distributed to various access nodes with the house. The access nodes include a packet handler that picks packets addressed to the access node from the packet stream and converts the picked packets back to the original signal, and further sent to a respective distributing connector of the access node to the end-user device.

Claims 1, 15, 26, 44, and 59 of US 6,108,331 fails to specify a main input node having the capability to communicate to the access node, and the access node communicating to the end-user device through a wireless medium such as radio frequencies, with each node would having an attached wireless transceiver for transmitting and receiving signals, as specified in claims 1, 12, 21, 23, and 25 of the application.

Buckley (US 6,366,840) teaches the use of wireless communication interfaces connected to each other through a wireless medium. Buckley discloses in figure 1, a system for enabling wireless communication among a stand-alone computer, built-in vehicular display, and a trip computer.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the patent's claimed invention by utilizing wireless communication among the main input node, access nodes, and end-user devices, as Suggested by Buckley. The motivation is to obtain a more versatile system where physical wiring is not required among the nodes and where the user can move the device-around without the trouble of wiring. Installation of the system is also made easier.
